# 

Cinel Strumenti Scientifici was founded in Padua in the 70's with a technical partnership of INFN LNL Legnaro Laboratory on particle accelerator projects and since then has been involved in some of the most challenging projects all over Europe.

Nowadays, CINEL has reached a long experience on mechanical design and manufacture of apparatuses in several scientific and research fields such as Synchrotron Light Sources (monochromators, fully integrated front ends and beam lines, experimental chambers), as well as accelerator components (vacuum chambers, accelerating cavities, radiofrequency quadrupole cavities) and accessories for analytical instruments such us laboratory gas generators.

Cinel has acquired skilled experience in the field of cryogenics, superconductivity, astrophysics and bio-mechanics collaborating with well-known institutions as a qualified partner in the mechanical, thermal and control system design and it can now propose turnkey solutions with high level standardization.

CAD-CAM environment and CNC machines allow Cinel to fully develop whole technical projects, from the design phase to the product certification taking care of all the electro-mechanical, pneumatic and hydraulic aspects.

Cinel in an ISO 9001 qualified company.

The first premises, the head quarter of the company, is  $2000 \text{ m}^2$ . It is arranged in order to separate the workshop area from the welding and from the mounting and testing areas. It is now operative a second premises of  $500 \text{ m}^2$  for final assembly and testing. Both premises are based in Vigonza (Pd) Italy.

AD series RE series

## Description

Strumenti Scientifici CINEL s.r.l. has developed a new high purity hydrogen generator (99,9999%) that is perfect for laboratory use since it allows to eliminate the safety problems caused by traditional bottles.

This new system uses PEM technology for the production of very pure hydrogen which is based on the innovative conception of the electrolytic cell that Cinel has developed together with the University of Padua's Chemical Science Department. (Patent pending No. PD2009A000394).

The new AD series (Automatic Dryer System) hydrogen generator does not need maintenance because the gas purifying system regenerates cyclically, any maintenance of desiccant cartridge is not required.

The standard maintenance operations only include the periodical filling of the internal tank with demonized water. The tank's high capacity of 10 l greatly reduces

the frequency of this operation.

The efficiency of the system is one of the best in the world for this kind of technology.

The new RC series (Regenerable Cartridge) hydrogen generator combines high performance with competitive price. The RC series has double desiccant cartridge columns with huge capacity that limit the frequency of the operations for the maintenance of the desiccant cartridge. A programmed alarm advises the user for the intervention

The cartridge can be also replaced by a new one immediately without any waste of working time.

### **Applications**

Ionization flame detector (FID)

Carrier gas for GC and GC-MS

Collisions on ICP-MS

### Technical data

from 2 to 10.7 bar (29 psi to 157 psi)
99,9999%
100-1020 cc/min
1Ø liters
Showed by graphic display
110 V / 60 Hz - 230 V / 50 Hz
35 kg
38Ø Watt
N.2 5x2Ø mm, 6.3 A, type T
Ø.1 bar (± Ø.5 %)
Graphic display, 128 x 64 px
IP2x
+15°C to +4∅°C
Ø-80%, non condensing
1∕8
width 34 cm, height 43 cm, length 50 cm
